Business Plan/Idea:

Our business plan is to recycle expired medicines by converting them into eco-friendly fertilizers, skincare products and household cleaning solutions. We will also ensure safe pharmaceutical waste disposal. Our plan is to extract the vitamins and minerals from expired medicine to develop sustainable products and offer waste management services to hospitals and pharmacies. We will generate cash for our business by selling our products, getting pharmaceutical waste management fees and industrial partnerships. The main aim of our business model is to reduce environmental pollution and promote sustainable living by finding innovative recycling solutions for expired medicine.

1. Core Strategy

Business Mission

Our business mission is to reduce the environmental pollution caused by expired medicines by converting the safe pharmaceutical components in the expired medicine into eco-friendly fertilizers, skincare products and household cleaning solutions while ensuring a pharmaceutical waste management system for safe disposal of the unused components.

Basis of Differentiation

- **Eco-Friendly Production:** Sustainable recycling processes that extract safe organic compounds for reuse.
- **Diverse Product Offerings:** Fertilizers, skincare products, and household cleaning solutions to be manufactured from safe pharmaceutical ingredients.
- **Regulatory Compliance:** Proper licensing and following the environmental and health safety regulations.
- **Bricks-and-Clicks Model:** Combination of online and offline sales for greater market reach.

Target Market

- **Farmers and Greenhouse Owners:** For cheap fertilizers.
- **Agricultural Stores:** Distributors of farming products.
- **Hospitals and Pharmacies:** For pharmaceutical waste management services.
- **Cosmetic and Beauty Brands:** Buyers of skincare products.
- **Supermarkets and Cleaning Companies:** Distributors of household cleaning products.

Product Market / Scope

- **Phase 1:** Focus on commonly used pharmaceutical waste components such as the vitamins, minerals and antioxidants for fertilizers and cosmetics.
- **Phase 2:** We aim to expand our operations to industrial applications and large-scale pharmaceutical waste management.

2. Resources

Core Competency

- We will have the expertise and technical knowledge of expired medicine recycling and sustainable product development.
- Team of researchers and professionals skilled in separating the safe pharmaceutical components from the expired medicine and chemical processing.
- Commitment to producing high-quality, eco-friendly products that follow the safety regulations.

Key Assets

- **Physical Assets** – Processing facility with research labs, packaging and manufacturing departments.
- **Intellectual Assets** – Patents, trademarks and sustainable production techniques.
- **Financial Assets** – Initial funding from personal investments and potential investors.
- **Human Assets** – Founders, researchers, employees, regulatory experts and industry advisors.

3. Financials

Revenue Streams

- Selling eco-friendly fertilizers to farmers and agricultural stores.
- Selling cosmetic and skincare ingredients to beauty brands and retailers.
- Selling household cleaning products to supermarkets and direct consumers.
- Fees for pharmaceutical waste management services from hospitals, pharmacies, and clinics.
- Selling our products both online and offline (Bricks-and-Clicks Model).

Financing / Funding

- Initial funding from personal assets and investors.
- Get grants from government or get funding from sustainability-focused programs.
- Pitch to venture capitalists as the business grows.

Cost Structure

- The collection and transportation costs of the expired medicines.
- Equipment and processing costs for recycling and repurposing the expired medicine.
- Manufacturing, packaging and distribution cost.
- Marketing and branding costs for our products to establish a strong customer base.
- Compliance costs for obtaining necessary licenses and regulatory approvals.

4. Operations

Product / Service Production

- **Collection and Sourcing:** We will source trusted suppliers, hospitals and pharmacies as the suppliers of our expired medicines.
- **Recycling and Manufacturing:** To create fertilizers, cosmetics and cleaning goods, we will separate safe medicinal ingredients from expired medications.
- **Quality Control & Safety Testing:** We will carry out rigorous quality assurance testing on each batch of recycled materials to ensure that it complies with health, safety and environmental standards.
- **Packaging and Distribution:** Eco-friendly packaging and effective supply chain administration.
- **Research and Development:** To find new uses for expired medications, we will develop and enhance our products in an internal R&D lab.

Channels

- **Online Sales:** Direct-to-consumer sales through e-commerce platforms.
- **Retail and Wholesale:** Partnerships with agricultural stores, supermarkets and cosmetics retailers.
- **Service-Based Revenue:** Waste management solutions provided to hospitals and pharmacies.

Key Partners

- **Hospitals and Pharmacies:** They will be suppliers of expired medicines.
- **Agricultural Brands:** Buyers of eco-friendly fertilizers.
- **Retail Chains and Supermarkets:** Distributors of skincare and household cleaning products.
- **Logistics and Distribution Companies:** Partners for nationwide and international product delivery.
